

Customer Registry Project Report

Project Title: Customer Registry

Abstract

A web application to add and view customer records using HTML, CSS, JavaScript, Node.js and Express.

Objectives

Manage customer information, demonstrate CRUD-ready architecture, and provide a simple REST API.

Technologies

Frontend: HTML, CSS, JavaScript. Backend: Node.js, Express.js. Version Control: Git/GitHub.

System Requirements

Node.js, npm, VS Code, modern web browser.

Architecture

Frontend sends HTTP requests to Express backend. Backend stores customer data in memory (can be extended to MongoDB).

Modules

1. Add Customer 2. View Customers 3. REST API

Folder Structure

frontend/: index.html, style.css, script.js backend/: server.js, package.json

API

GET /customers - returns all customers. POST /customers - adds a customer.

Testing

Verified adding customer and displaying customer list.

Future Enhancements

MongoDB integration, edit/delete customers, authentication, search, pagination.

Conclusion

The project demonstrates a basic full-stack customer management application suitable for academic learning.
